SMART HOME SYSTEM

ABOUT US

As a Keemple company, we have been providing innovative Smart Home solutions to Polish homes for many years.

Our main goal is to create a Smart Home system that increases safety and comfort in our customers' homes in an easy and affordable way. Home is a space where each of us spends time with our loved ones, aspires to peace, protection and harmony of living together. That is why our devices have been developed to foster these goals and help reduce unnecessary worries.

In creating our system, we also wanted to give our customers the greatest possible flexibility and opportunity to tailor the devices to their needs.

However, the Keemple Smart Home System is much more than just devices. We also offer our Users professional technical support and constant contact with our Customer Service Department.

10 REASONS WHY YOU SHOULD CHOOSE KEEMPLE

- 01 — Free installation
- 02 — Warranty
- 03 — Non-invasive installation
- 04 — Possibility to expand the system
- 05 — Free application
- 06 — Free system training
- 07 — Premium customer service
- 08 — Free remote support
- 09 — Security, comfort, savings
- 10 — Remote access to the system wherever you are

THREE PRIMARY KEEMPLE VALUES

01

SECURITY

02 CAMERA

You can monitor what is happening in your home at any time.

04 SMOKE SENSOR

Will inform you when smoke is detected, for example in the event of a fire.

01 DOOR / WINDOW SENSOR

You will receive a notification if a door or window is opened.

03 WATER SENSOR

Will inform you in time of a water leak and the risk of flooding.

05 SMART SOCKET

Allows you to check at any time which appliances are connected to electricity and remotely switch them off or on.

02 — COMFORT

02 LIGHT SWITCH

Control the lighting in your home from anywhere.

04 UNIVERSAL INFRARED CONTROLLER

We are able to control devices controlled by infrared remote controls, i.e. TV, air conditioning, radio.

01 DIMMER SWITCH

Allows you to control light intensity in any situation.

03 APP

Operate all your devices from the app.

05 RADIATOR VALVE

Optimize heat distribution with smart radiator valve.

03 — SAVING

02 SMART SOCKET

Allows you to switch connected devices on and off remotely and with the help of scenarios created in the app.

04 RADIATOR VALVE

Optimise costs with thermostat control.

01 LIGHT SWITCH

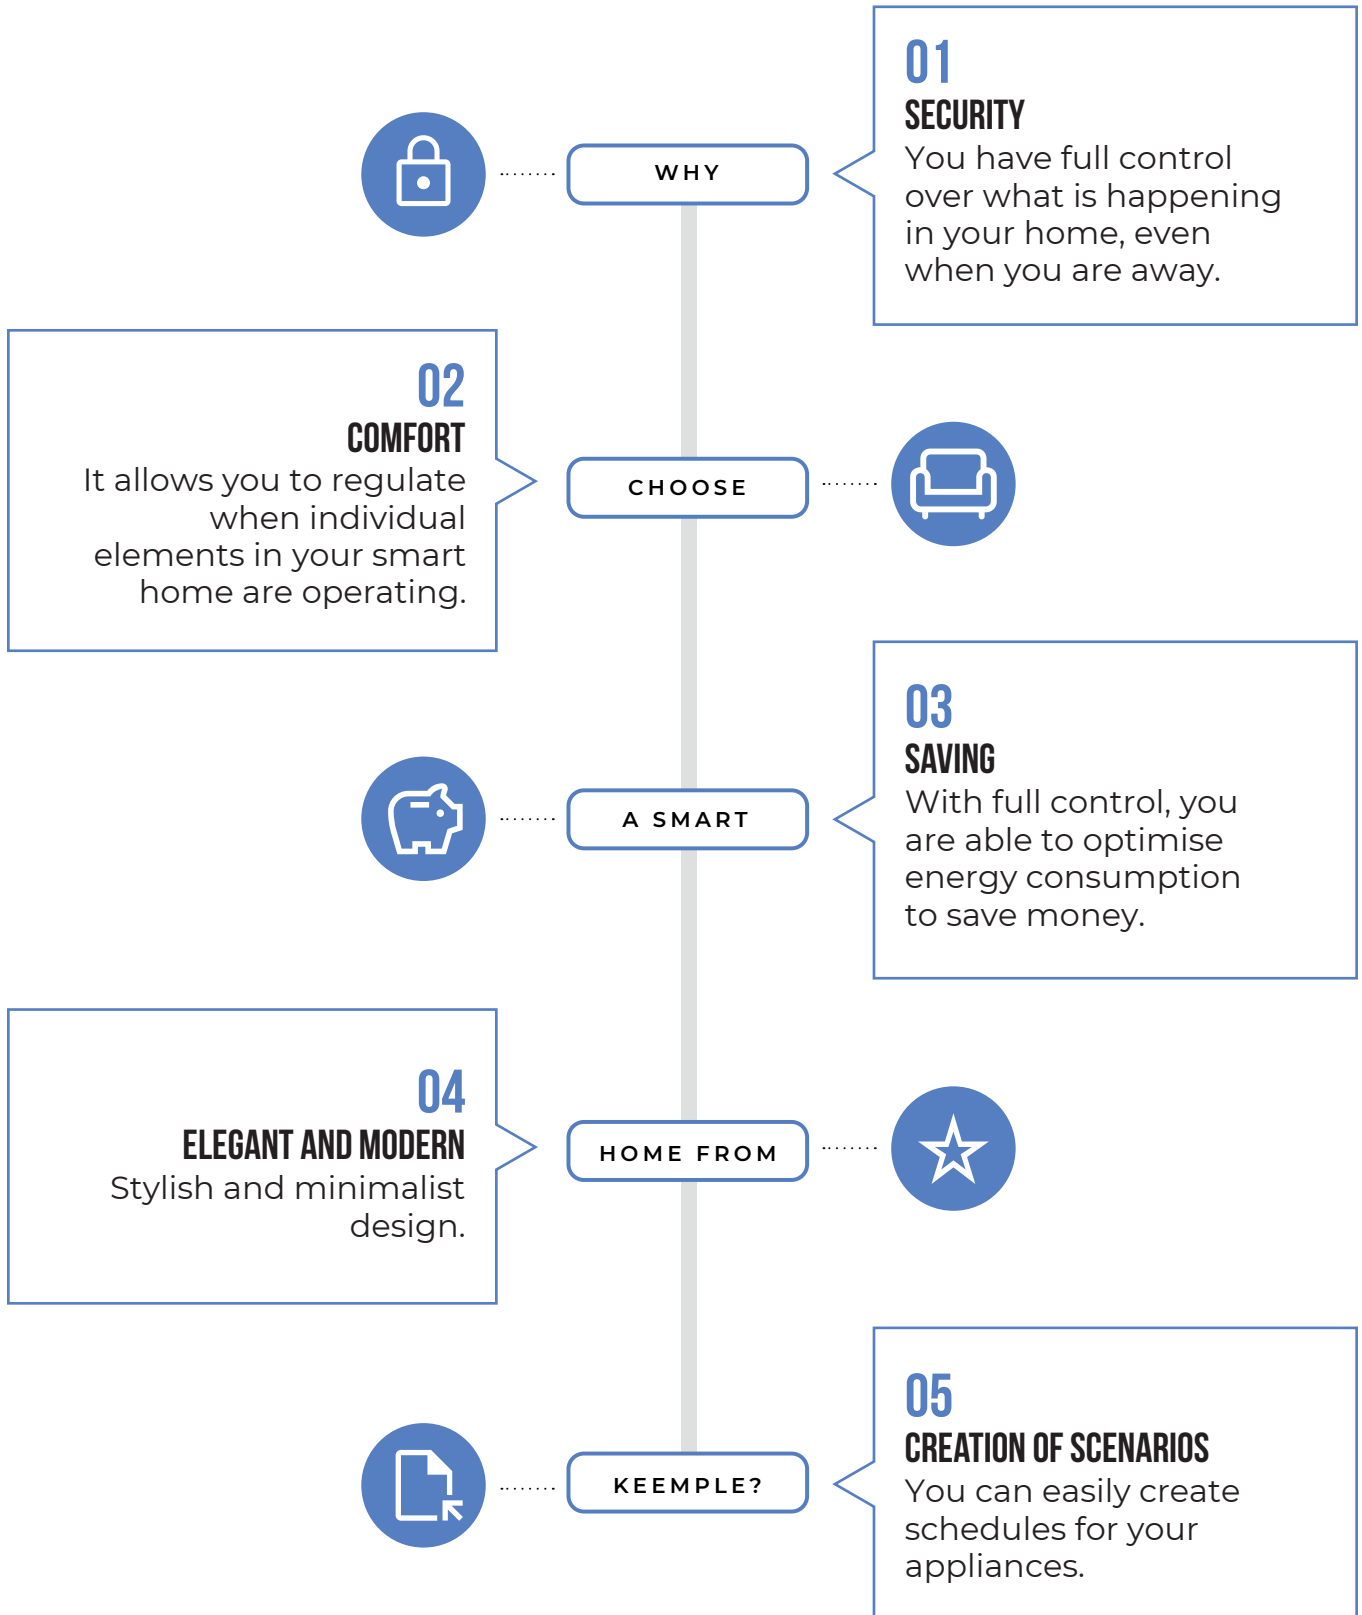

Create a customised lighting schedule to suit your needs.

03 APP

Create scenarios and schedules to help you avoid unnecessary energy consumption.

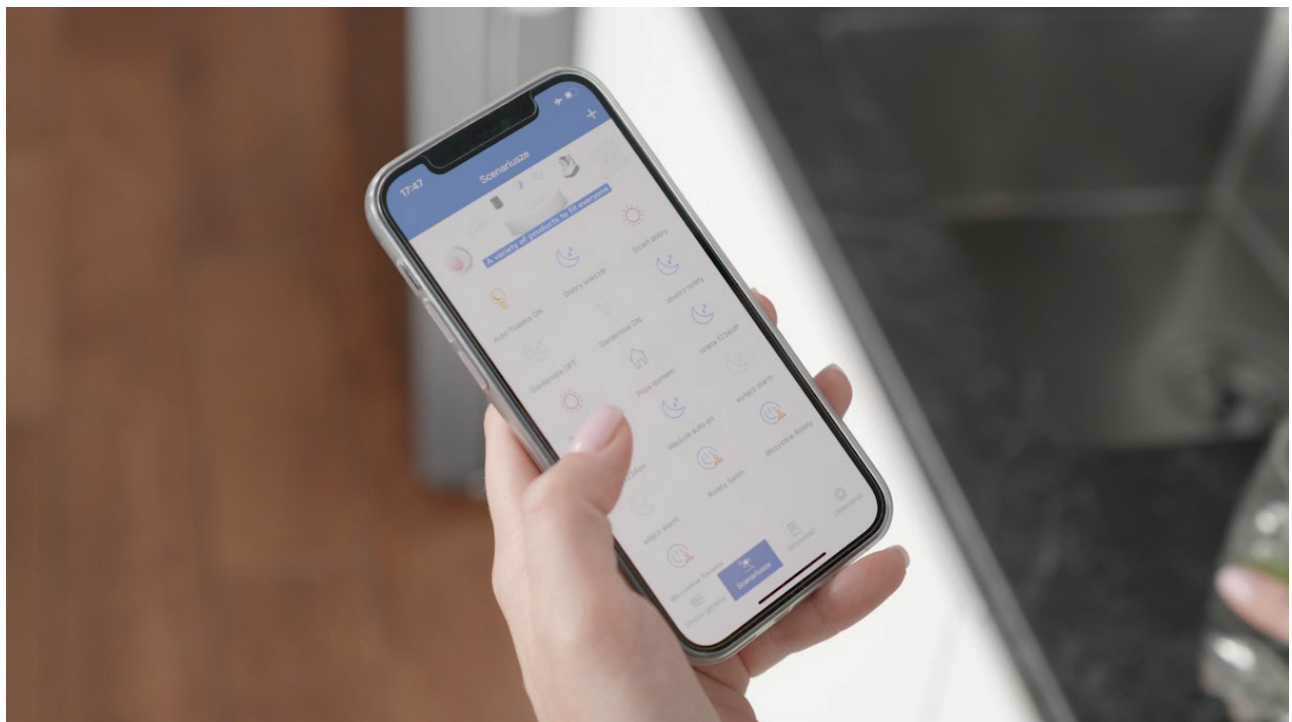

THE BENEFITS OF OUR SMART HOME SYSTEM

APP KEEMPLE 2.0

With the scenarios available in the Keemple 2.0 app, you can easily create schedules for your appliances. This allows you to regulate when the various elements in your smart home operate. Create a scenario that turns off all the lights in the house when the housemates go to work or school. Open the blinds automatically in the morning to wake up with the first rays of the sun.

Not only will you create scenarios in the app, but you can also see the current status of your appliances. Wondering if you left your coffee machine on? Just take a look in the app, where you can check this and change it with one click. This gives you full control over what's happening in your home, even when you're away.

OUR DEVICES

GATEWAY KEEMPLE

The Keemple gateway is the central smart home device that connects all elements in a Z-Wave network. Thanks to the wireless control system, you can conveniently manage your devices from the Keemple 2.0 app available for both Android and iOS. The entire Keemple Smart Home system meets customer expectations and therefore combines high functionality with ease of use.

REMOTE SWITCH

The Keemple remote control allows you to control all Keemple Smart Home devices. It is equipped with four buttons that can be freely configured with your scenarios. You can use one device to lower the temperature in a room, close a blind or control the lighting in your home. The remote control allows you to run scenarios previously created in the Keemple 2.0 app.

UNIVERSAL INFRARED CONTROLLER

With the universal infrared controller, we can control devices that have an infrared receiver. We are able to control devices such as air conditioners, TVs, etc. using the Keemple 2.0 app.

CAMERA

The Keemple camera is a monitoring device that has real-time viewing. With the camera, you can monitor what is happening in your home at any time. The device has a recording function and also allows you to communicate by voice with your household members when you are away from home. In addition, the device has a motion detection function.

SMART SOCKET

The carefully developed Smart Home technology allows you to freely start and stop electrical appliances connected to the Smart Socket. It is possible to control energy consumption, so you will have a real-time overview of these parameters. Worrying about electronic devices left on is a thing of the past. Using the Keemple 2.0 app on your mobile device, you are able to switch them off remotely. The smart socket will bring your home to a higher level of technology and efficiency.

DIMMER SWITCH

The Keemple dimmer allows us to control the light intensity in any situation. We have the possibilities to adjust the brightness level according to our preferences. Any moment is a good time to influence the friendly atmosphere in your home. A party at home with friends, a birthday with the family, a romantic dinner - in each case, the dimmer is the perfect choice. The dimmer is also equipped with a Keemple scenario button - which, when pressed, triggers a previously created scenario in the app.

CURTAIN SWITCH

The Keemple curtain switch allows us to control the light intensity in any situation. We have the possibilities to adjust the brightness level according to our preferences. Any moment is a good time to influence the friendly atmosphere in your home. A party at home with friends, a birthday with the family, a romantic dinner - in each case, the curtain switch is the perfect choice. The curtain switch is also equipped with a Keemple scenario button - which, when pressed, triggers a previously created scenario in the app.

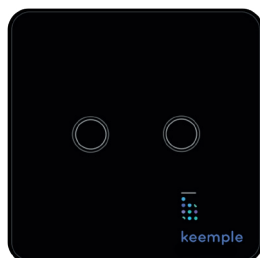

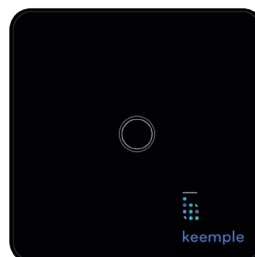

RADIATOR VALVE

A high-tech smart radiator regulates the flow and delivery of heat, so you can heat your rooms more economically. With your settings, the thermostat activates the heating, adjusting the room temperature to the occupants' preferences.

SINGLE LIGHT SWITCH

The Light Switch not only allows you to manually control a single lighting circuit, but with the Keemple 2.0 app you are able to control the lighting in your home from anywhere. The Light Switch has a Keemple Scenario button, which allows you to run a scenario previously created in the Keemple 2.0 app.

DOUBLE LIGHT SWITCH

The Double Light Switch not only allows you to manually control two lighting circuits, but with the Keemple 2.0 app you are able to control the lighting in your home from anywhere. With the right configuration, you can create an individual lighting schedule tailored to your needs and in line with your rhythm. The Light Switch has a Keemple Scenario button, which allows you to run a previously created in the Keemple 2.0 app scenario.

MOTION SENSOR

A motion sensor is a device that detects the movement of objects that have a temperature similar to the human body. It is an intelligent device that, when it detects movement, will react to it in the way we have planned.

SMOKE SENSOR

The smoke detector is a piece of equipment that will inform you with an audible signal and the Keemple 2.0 app in the event of an emergency. It is the ideal solution for increasing the level of security in your home.

DOOR / WINDOW SENSOR

The opening sensor is the device that triggers the appropriate response and gives your Smart Home system the signal to act. When you open the door, you may be greeted by your favourite music sounds, the interior of your home will light up and the blinds will start to open. The sensor is a device that will also keep a watchful eye on the security of your home while you are away. You will receive a notification if doors or windows are opened.

WATER SENSOR

The Water Sensor is a device with which you can keep tabs on any room where there is access to water. Thanks to its connection to the Keemple 2.0 app and the audible alarm, it will inform you in time of a water leak and the risk of flooding, allowing you to react early enough to minimise damage.

SIREN

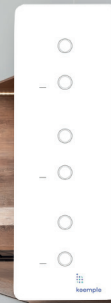

The siren is a piece of equipment that informs you by means of an acoustic signal or the Keemple 2.0 app in the event of an emergency. It is the ideal solution for increasing the level of security in your home. The siren does not only have to serve as an alarm device - with a choice of 10 chimes and 3 volume levels, it can be used as a signalling device for various events.

DOUBLE FRAME

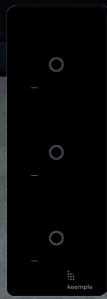

The double frame dedicated to the G 2.0 device series allows two Keemple devices with touch panel to be installed in a standard double box.

TRIPLE FRAME

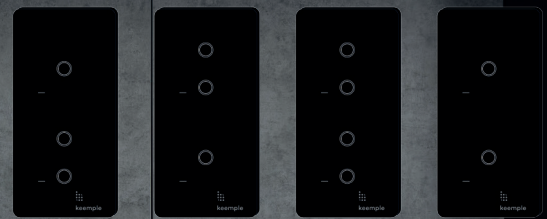

NOWOŚĆ

PERSONALISATION

TRIPLE FRAME

NOWOŚĆ

DOUBLE FRAME

In the double frame, any two Keemple devices with a touch panel can be placed (such as light switch, dimmer, curtain switch). Available in horizontal and vertical configurations.

WHY SHOULD YOU RELY ON OUR SYSTEM IN YOUR HOME?

Keemple's Smart Home system is a set of devices that communicate wirelessly over a Z-Wave network. They are characterised by lower energy consumption compared to WiFi-based equipment, but are also more resistant to interference. Additionally, the Z-Wave network provides increased security for users through the use of advanced encryption. Our devices do not require any complicated installations or wall forgoing.

A key component of our Keemple Smart Home system is the free Keemple 2.0 app, available on Android and iOS platforms.

It is with this app that you gain full control over your devices and can monitor what is happening in your home in real time. And that's not all! The app also allows you to create personalised scenarios, which fit perfectly to your lifestyle and needs. Your only limit is your imagination!

Start building your smart home with our Smart Home Keemple system today!
